Art Unit: 1711

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

35 USC 112, Second Paragraph

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claims 1 and 11 etc., the recited "obtained by..." is unclear and indefinite because it infers that the objective *can be obtained by* other means, i.e. other than hydrolysis, and thus fails to meet the requirement of the statute that a claim must particularly point out and distinctly claim what applicant regards as his invention.

A suggested phrase may be "produced by" to avoid ambiguity.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United

Claim 9 is rejected under 35 U.S.C. 102(b) as being anticipated by USP US 6096834 see abstract, cols. 1-4.

The reference discloses a process for the production of quaternary haloalkyl-ammonium salts, wherein a trialkylamine is optionally added to produce a quaternary ammonium salt at each unreacted haloalkyl substituent. In another embodiment, the polymer is treated first with an amount of trialkylamine sufficient to produce a quaternary ammonium salt on only a portion of the haloalkyl substituents, and then the linker is attached to substantially all of the remaining haloalkyl substituents.

The reference discloses that the most preferred dialkylamine is dimethylamine. Solvents which are suitable for this reaction include tetrahydrofuran (THF), ethyl acetate, dichloromethane, toluene, alcoholic solvents, and water, and mixtures thereof. The preferred solvents are THF, ethyl acetate and dichloromethane. Although the reference does not delve deeply into the preparation/isolation of the material to the extent that washing and/or filtering of a product are already extremely well known and there appears to be no unobvious result therefrom.

The reference discloses a quaternary haloalkyl- ammonium salts prepared from the same components as claimed by applicants. Note that the in view of the above, there appears to be no significant difference between the reference(s) and that which is claimed by applicant(s). Any differences not specifically mentioned appear to be conventional. Consequently, the claimed invention cannot be deemed as novel and accordingly is unpatentable.

Correspondence

Please note that the <u>cited</u> U.S. patents and patent application publications are available for download via the Office's PAIR. As an alternate source, <u>all</u> U.S. patents and patent application publications are available on the USPTO web site (<u>www.uspto.gov < http://www.uspto.gov></u>), from the Office of Public Records and from commercial sources. Applicants may be referred to the Electronic Business Center (EBC) at < http://www.uspto.gov/ebc/index.html> or 1-866-217-9197.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Terressa Boykin whose telephone number is 571 272-1069. The examiner can normally be reached on Monday through Friday from 6:30am to 3:00pm.

Application/Control Number: 10/652,200 Page 4
